Tile Placement
Drafting

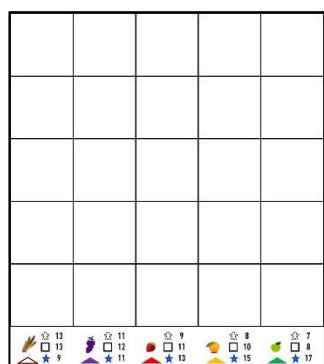

Key Selling Points

- A game that twists drafting rules to create intricate interactions.
- Players encounter challenges from their opponents, but ultimately, they must solve the puzzles themselves to achieve the best possible score.

How to Play

- Each player has their own personal board, one "Personal Tile," and 3 coins.
- In each round, each player takes one more tile than the number of players.
- All players then arrange their tiles in the order of the tile they want to give to the player on their left, the tile they want to give to the next player on the left, the tile they want to keep for themselves, and finally the spare tile.
- After sorting, they pass the stack of arranged tiles to the player on their left. The player receiving the tiles places them on their own board. If they do not like a tile, they can pay 1 coin and check the next tile, which they can then choose to use.
- Once they've used a tile, if only one tile remains, the round ends.
- At the end of the round, if there is one space left on their personal board, they must fill it with the "Personal Tile" they received at the beginning of the game, completing their board.
- The player with the highest total score, calculated by the number of stars gathered in each crop field multiplied by the sum of workers directed towards that field, wins the game.

Components | 4 Personal Boards, 4 Personal Tiles,
100 Game Tiles, 40 Coin Tokens

1. Game Information

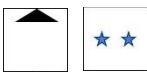

- 2~4 players / 30 min / 6+
- Set Collection, Tile Placement, Drafting

2. Components

- 4 personal boards, 4 personal tiles

The personal board is sized 5x5 and is designed with spaces where tiles can be placed. At the bottom, there is a chart indicating the composition of the crops. The personal tile has one side with a single arrow and the opposite side displaying two stars, as shown in the illustration below.

- 100 game tiles

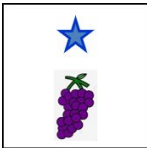

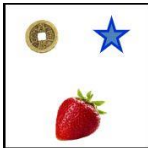

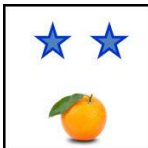

The game tiles are divided into three major types.

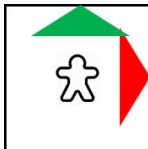

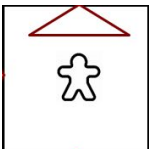

1) Coin Tile

When placing this tile on your personal board, you gain 2 coin tokens.

2) Crop Tile

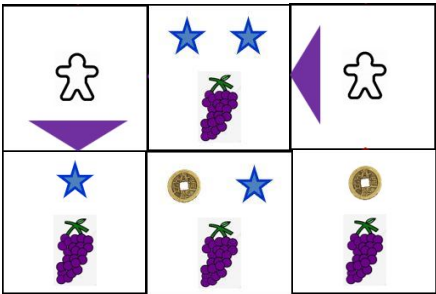

There are 5 types of crops, and each crop tile can have between 1 to 3 stars. Additionally, there are tiles that consist of 1 coin, or 1 coin plus 1 star. When a crop tile with 1 coin is placed on a personal board, you gain 1 coin token. Stars are used for scoring at the end of the game.

3) Worker Tile

The worker tile can have up to 2 arrows. Each arrow indicates that the worker is cultivating crops of the corresponding color.

* Example of Scoring Rules

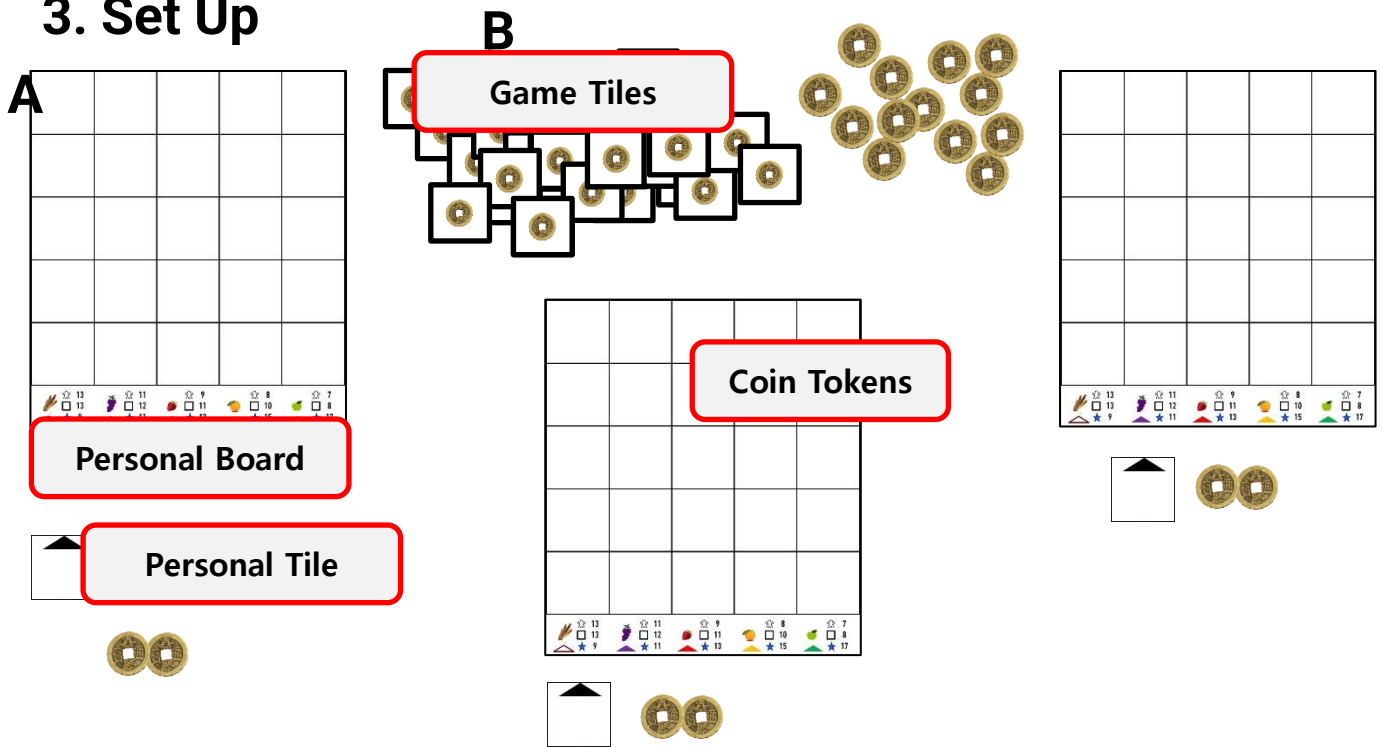

Scores are calculated for each crop cluster. The score for a cluster is determined by multiplying the number of stars in that crop cluster (4 stars in the example on the left) by the number of arrows from workers directed towards that cluster, corresponding to the same color (2 arrows in the example on the left). This product represents the score for that cluster.

- 40 coin tokens

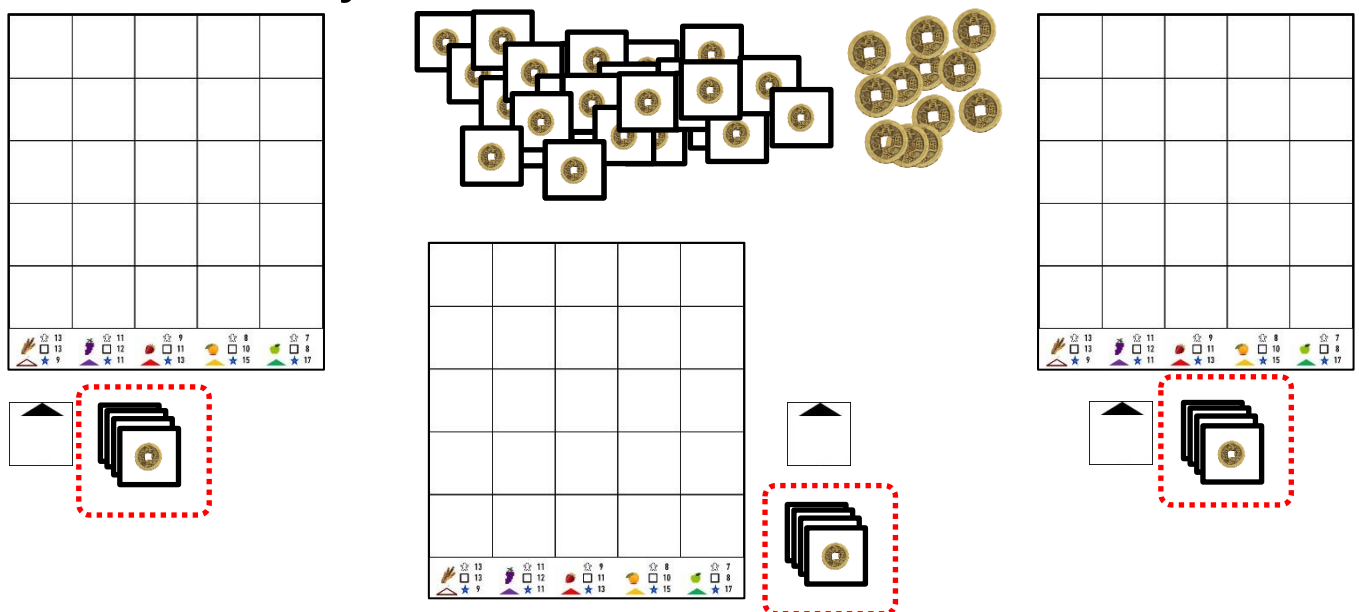

Doore / Full Rulebook

3. Set Up

- A. Each player takes a personal board and one "Personal Tile." Additionally, each player starts with 3 coin tokens.
- B. The game tiles are placed face down in a location that is easily accessible to all players. The coin tokens are also placed in a convenient spot for everyone to reach.

4. How to Play

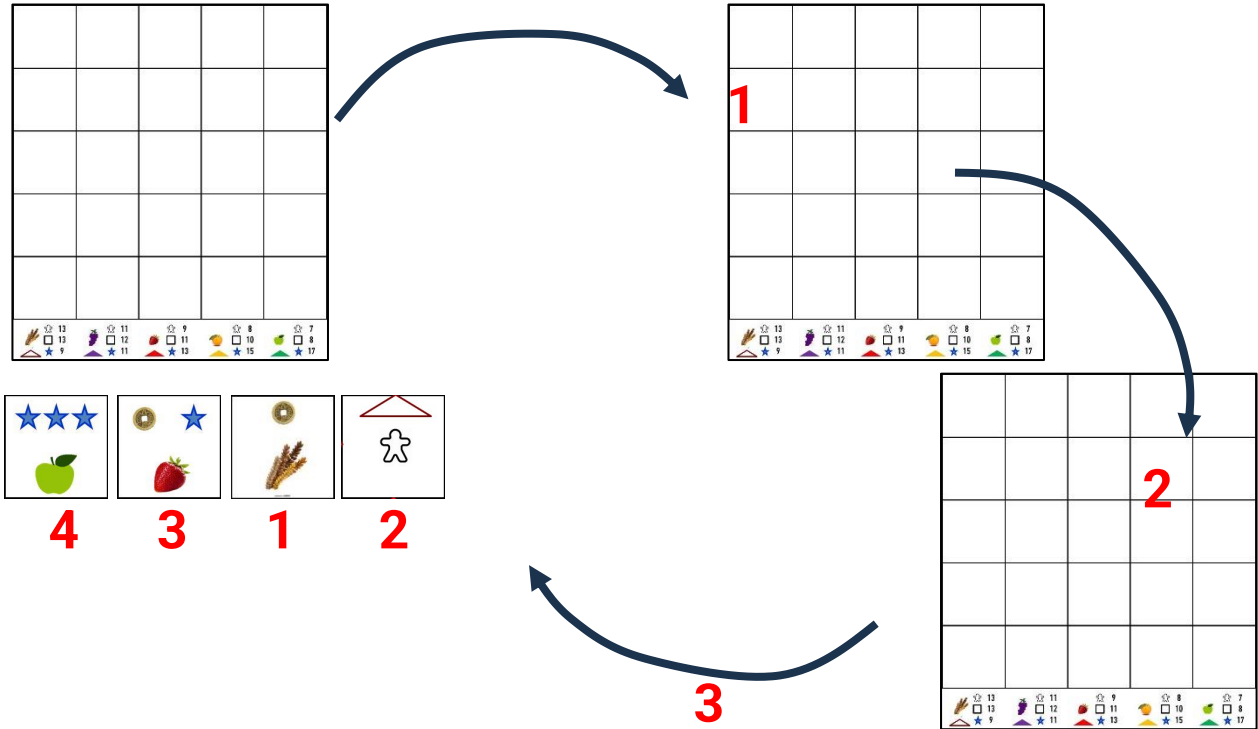

1. In each round, each player takes a number of tiles equal to the number of players plus one.
However, in a two-player game, each player will take 5 tiles.

Doore / Full Rulebook

4. How to Play

2. Each player examines the drawn tiles and arranges them in order.

Among the drawn tiles, the topmost tile is arranged to be given to the player on their left, the next tile to the player two seats to the left, and so on. Since each player has drawn one more tile than the number of players, the last tile is placed at the bottom as a spare tile.

For example, if a player receives 4 tiles, they might place the following:

The first tile is a crop tile with no stars, a rice tile with 1 coin.

The second tile is a worker tile with only 1 arrow.

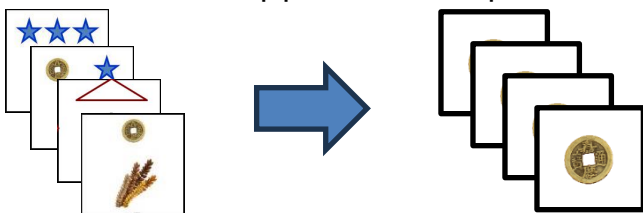

The third tile is a strawberry tile that has both stars and a coin (1 coin + 1 star).

The last tile is an apple tile with 3 stars.

Since the tile placed at the back is more likely to be used by the player, they should ideally place better tiles further back in the order.

Once the order is established, the tiles are kept hidden, and a tile stack is created according to that order.

For instance, if the order is set as shown in the situation above, the tiles will be flipped in the specified order to prepare for passing them along.

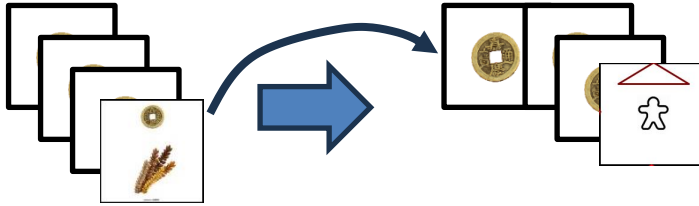

* In a two-player game, after receiving 5 tiles, the tile stack is arranged in the order of opponent's tile - my tile - opponent's tile - my tile - spare tile.

Doore / Full Rulebook

4. How to Play

3. Once all players have finished preparing their tile stacks, they simultaneously pass their prepared tile stacks to the player on their left. Each player flips over the top tile of their tile stack and decides whether to use it. If they do not like the tile, and if they have any coins, they can pay 1 coin to check the next tile. The previously checked tile is placed at the bottom of the tile stack.

If a player decides to use a specific tile or has no coins left, they must place the revealed tile in any available space on their personal board.

At this time, the "Worker Tile" must be placed with the worker's head facing upwards; its orientation cannot be changed in any direction.

When placing the tile, if the tile has coin icons, the player receives a number of coins equal to the number of icons. However, the maximum number of coins a player can hold is 10. Additionally, if the player does not want to place the selected tile face up, they can place it face down and will then receive 1 coin. After placing the tile, the remaining tile stack is passed back to the player on the left.

4. The players continue the cycle of passing the tile stack to the left, checking tiles, and placing them. When only 2 tiles remain, all players check both tiles and decide which tile to place. If a player wishes to place the tile from the back of the stack, they must pay 1 coin. Once a player has placed one of the two tiles, that round ends, and the remaining tile is mixed with other tiles on the floor.

5. Once all tiles have been used as described in step 4, the players will draw tiles equal to the number of players plus one to start the next round and repeat steps 1 to 4.

6. Following this process, a 2 or 4 player game will have 6 rounds, and a 3 player game will have 8 rounds. At the end of the game, players will fill 24 out of the 25 spaces on their personal boards. In the remaining empty space, they can place their "Personal Tile" received at the start of the game in any desired position and orientation. The arrow side of the "Personal Tile" does not have a worker image and has a black arrow instead, allowing placement in any direction towards a crop cluster of their choice (acting as a wild card). Alternatively, they can use the other side, which has 2 stars that can be assigned to any crop connected to that tile as 2 stars for one type of crop.

5. Scoring & Victory

Scores are calculated for each crop cluster.

The score for each crop cluster is determined by multiplying the sum of the stars in that cluster by the number of arrows that point toward that cluster, matching the crop color. The player with the highest total score wins.

In the case of a tie, the player with more remaining coins is declared the winner.

* Score Calculation Example Apple Cluster: 5 stars x 1 arrow = 5 points.

Strawberry Cluster:
2 stars
x 1 arrow
= 2 points.

Tangerine Cluster:
3 stars x 2 arrows
= 6 points.

Rice Cluster: 0 stars x
any number of arrows
= 0 points.

Grape Cluster:
5 stars x 2 arrows
= 10 points.

Grape Cluster:
1 star x 1 arrow
= 1 point.

총점은 5+2+10+6+1=24점

6. Crop Characteristics

		13			11			9			8			7
		13			12			11			10			8
		9			11			13			15			17

In the above illustration, there are many worker arrows available for cultivating rice, grapes, strawberries, tangerines, and apples.

Additionally, there are numerous crop tiles for cultivating these crops.

(Rice farming requires a lot of workers.)

7. Rule Variant

Children's Rules: Worker tiles can be placed in any direction, regardless of the direction of the worker's image.

Advanced Rules: When there are only 2 tiles left at the end of a round, players cannot check all the remaining tiles. Instead, they must use a coin to check the next tile.
